

ABSTRACT

5 The present invention provides method, preparation and use of a variety of
pharmaceutical composition containing at least one digitalis glycosides such as oleandrin,
odoroside-A, neriifolin, proscillaridin-A, methyl-proscillaridin-A, digitoxin, digoxin and
amorphous cyclodextrins. In another aspect, the present invention provides an effective
method to reduce the growth of cancers or reducing the incidence of metastases. In yet
another aspect, the present invention provides an effective method for treating diseases in
10 a warm-blooded animal.
